

DISINFECTION

FOR A SAFER ENVIRONMENT

PREVENTION & ELIMINATION

Sanitation is a very important step to prevention. Manual wipe-down of all surfaces easily accessible to the public will minimize risk of contamination.

ULV Disinfection is another important method to disinfect all other areas, especially in the spread of infection hospital, public living areas, public transportation vehicles (trains, buses and airplanes), ambulance, patient care, school and nursery and so on.

Our treatment uses products safe and effective for the control of *viruses, pathogens and bacteria*.

After treatment, your place will smell fresh and clean. There is also no need to clean up, and no worry of contamination.
